

Client Website Requirements Document

Client Brief

Hello Development Team, I would like to build a modern and professional website for my business. The website should have an attractive design, be mobile-friendly, and provide a smooth user experience across all devices. Key requirements:

- Home Page with company introduction, banner, and featured services.

- About Us page describing the company, mission, and team members.
- Services page showcasing all services with detailed descriptions.
- Portfolio/Gallery section to display previous work and achievements.
- Contact Us page with contact form, email, phone number, and Google Maps integration.
- User authentication (Sign Up/Login) for registered customers.
- Admin Dashboard to manage content, users, and website updates.
- Search functionality to help visitors quickly find information.
- Fast loading speed, strong security measures, and SEO optimization.
- Integration with social media platforms and newsletter subscriptions. The website should use a clean UI/UX design, be scalable for future enhancements, and follow modern web development standards. I would also like the project to be delivered with proper documentation and testing before deployment. Thank you, Client
